Notes:
Evaluation Methods Used:

The accessibility assessment was executed per the following steps:

I. A sighted accessibility expert conducted an overall technical analysis in order to identify issues of technical compliance that would affect mobility impaired, deaf/hearing impaired and low vision users. The evaluator inspected each screen using Chrome 76+ browser with the Wave and aXe toolbars. Code analysis was conducted using browser Developer Tools.

II. Keyboard accessibility analysis (for mobility and physically impaired users) was conducted by attempting to thoroughly navigate the web application through the keyboard, without using a mouse. This testing was conducted in Chrome 76+ browser.

III. For deaf and hard of hearing users, any audio/video with audio content was assessed for proper captioning.

IV.   The accessibility for low vision users was evaluated three ways: (1) using the screen magnification, palette, and contrast controls provided by the operating systems; (2) using the font resizing capability offered by the browser, and (3) using Color Contrast Analyzer version 2.2.

 V.   The screen reader testing was conducted by an evaluator who is legally blind. The goal was to identify accessibility barriers that are likely to be experienced by users who are blind. The evaluator worked through the web application using the JAWS for Windows (v. 2019) screen reader with Chrome 76+ browser.

VI.   Any usability issues for users with disabilities encountered during the accessibility assessments in Steps I-V were noted for subsequent mention.
